Title: St. Helena's new Parks and Rec director all about community

Publication Date: August 14, 2017

Summary: St. Helena's bocce ball fans can take heart: Although the city's new Parks and Recreation director, Andre Pichly, has never run a bocce league, he says he has great respect for the game and wants to make it even better for local players.

The 56-year-old Sacramento-area native took over the department July 1 after spending most of his long career in Auburn -- six years in the rec department -- and 20 years as recreation supervisor for West Sacramento.

Pichly said he came to his career by a long, circuitous route, studying in a variety of areas on and off at **American River College** for seven years, where he met the woman who became his wife, Napa native Alene Clift. She encouraged him to transfer to Sacramento State where he found a calling.

Colleges With the Greatest Racial and Ethnic Diversity, Fall 2015

At seven of the 40 colleges that were the most diverse in their sectors in 2015, more than 30 percent of students reported being of two or more races. Six of those colleges are in Hawaii. The seventh, National American University at Sioux Falls, which also had the highest percentage of American Indians among institutions on the list, is in South Dakota. Diversity-index figures are shown in the last column of the table. They indicate, on a scale of 1 to 100, the probability that any two students at an institution are from different racial or ethnic groups.

Note: Percentages for nonresident aliens — the U.S. government's term for non-U.S. citizens, or foreign nationals, without permanent-resident status to live in the United States — and the various racial and ethnic categories are based on the total number of students in that particular category out of all students whose race is known. The U.S. Department of Education counts Hispanic and nonresident-alien students as part of distinct racial or ethnic categories, so they are considered as such when calculating the diversity index. The index measures the probability that two people chosen at random from the student body are of different racial or ethnic groups. Students who identify as two or more races are considered as automatically diverse in calculating the index. Institutions with fewer than 500 total students were excluded.
